

MASTER OF ARTS ENVIRONMENT AND SOCIETY

**What do plants have to do with politics?
How are the environment and justice related?
Where does art meet climate change?**

We explore and explain the diverse relationships
between the environment and society.

How have these relationships changed over time?
Where do we stand today? Where do we want to go?

The interdisciplinary course of study explores current research questions and debates related to transformation processes in our environment. Disciplines involved include history, literature, art history, law, anthropology, geography, and sociology.

Students learn

- to understand, describe, analyze, and interpret transformation processes related to environment and society
- to adopt current and historical perspectives from the humanities, social sciences, and natural sciences and to relate them to one another
- to think and work in interdisciplinary and transdisciplinary settings and teams
- to conceive, implement, and reflect upon their projects and professional goals in the area of environment and society
- to use research and presentation methods
- to communicate and collaborate effectively
